Pathology Consultation Report- The [REDACTED] Hospital, [REDACTED] 4, Houston, TX [REDACTED]

CASE: CN-05-[REDACTED]

CLINICAL INFORMATION:

HISTORY: Hepatitis C, huge liver mass almost replacing liver,
r/o Hepatocellular carcinoma

MATERIAL:

Liver mass, FNA

PREPARATION:

Fine needle aspiration biopsy of the liver mass was performed under Ultrasound guidance.

2 smears were prepared: 1 submitted for PAP stain and
1 for Diff-Quik.

Adequacy check was performed and material was found to be
"atypical - suspicious cells" for interpretation by Dr. [REDACTED]

Tissue submitted to Histology, S-[REDACTED]

ADEQUACY:

Specimen is satisfactory for evaluation.

GENERAL DIAGNOSTIC CATEGORY:

Positive for malignancy.

DESCRIPTIVE DIAGNOSIS:

Cytologic features consistent with hepatocellular carcinoma.
Thickened trabecula with endothelial wrapping noted. No bile ducts in
background. Cellular smears. No transgressing vessels.
Please correlate with histology, S-05-15358.
