Education

Practical, Relevant and Timely

67264

The CAP is the leading resource for information and education in the practice and science of pathology and laboratory medicine.

Outstanding pathologists, subject matter experts and professional instruction designers develop the content of our education programs. Their combined expertise allows the CAP to provide timely, relevant education that meets the needs of laboratory professionals conveniently and effectively. We rigorously evaluate our programs to integrate breakthroughs in science and medicine, and to continuously improve the quality of every education activity we offer.

Building Confidence through Competency

Pathologists and laboratory professionals can demonstrate and constantly improve their skills through CAP education. Our programs fulfill CME, CE and CLIA regulated competency requirements, and they allow laboratory staff to excel as members of the treatment team.

We provide programming flexibility that meets individual needs, including live seminars, on-line courses, roundtables, audioconferences, publications and journal-based programs. Our members develop more than 100 courses for the CAP annual meeting, where all pathologists are encouraged to meet and share as a community.

For more than 60 years, the CAP has educated pathologists and laboratory professionals with a steadfast commitment to quality care. Every test, new technology, inspection and regulation ultimately influences a patient outcome. Our goal is to provide confidence in your lab and quality of care for your patients.
